

GEOMETRY: MEASURING THE EARTH

A pilot and engineer's handbook to
flat earth truth.

1ST EDITION

G P Saint-Denis

THE EARTH IS FLAT

I have been thinking about writing a flat earth book for a couple years now. I wasn't sure how to approach such a hated and controversial topic. I started writing a book with a boring textbook-like feel to it. I came across this poster that made it much more fun to dive into the topic. The poster may be copyrighted but I am not writing this book for monetization. I'm writing this book for non-profit educational purposes, which falls under fair use, just like all the YouTube videos.

A LIST of the MANY THINGS YOU WILL FIND ON THIS POSTER

SILVER - FISH CLASS DIRIGIBLE: the ice topped dirigible known as, the US FREEDOM, travels the wondrous frontier, delivering small gifts from their home to the cities of the world (represented by the different confetti), all happening (this time) under the Solar Arrangement: Venus, Moon and Sun Eclipse.

- | | |
|----------------------------|---|
| A. Space SHuttle "Forever" | N. Jogger |
| B. Radio Station | O. Sasquatch |
| C. Observatory | P. Wine Barrel |
| D. Sun Bather | Q. Jack O' Lantern |
| E. Falling Star | R. Advertisement Poster |
| F. Hang Glider | S. Trash can / TV |
| G. Statue of Liberty | T. Nazca line drawing of Man |
| H. Marriage Proposal | U. Air Balloons x 3 |
| I. Graffiti | V. Nuclear Power Plants x2 |
| J. Sun Dial | W. Cannabis Plants x2 |
| K. Helicopter | X. Tree with yellow Ribbon x2 |
| L. Boy lighting Fireworks | Y. Man Shouting |
| M. Formula 1 | Z. Mt. Might-o-wanna-killeh-mania (volcano) |

Animals Found on Earth

1. Insects (Spider Web)
2. Reptiles (Lizard)
3. Amphibians (Lilly Pads / Frogs)
4. Fish (Trout)
5. Mammals (Elk and Cattle Skull)
6. Birds (Hawk, vultures, flock)
7. Humans: Children Playing and a Man walking his dog.

Still more to see :

message in a bottle *
 _____ or _____ **
 _____ ***
 _____ ***

You may also find: Sirens x 2, Sailing Ship, Sea gulls, a Silverfish-Class, Submarine and Chief Sits like a Rock.

Places to visit: New World, Old World, Forest, Tundra, Desert, Grasslands, cities, towns, lake ... islands, cemetery, waterfall and ... Antarctica (?)

Cameo Appearance: the Supreme Being, from the 1977 movie, Time Bandits: "Bring me the map !" with a special appearance by :

EASTER ISLAND ROYALTY (MOAI)

Fantasy Beings: Hippocampus (mythical Sea Horse) and the Demons of the Inferno. or "Inner Earth."

a Nautical Compass with no Southern Direction (whaaa t ?)

envisioned, designed & produced at:

Most people believe the earth to be a spinning globe because that's what they've been told to believe since they were born. Mass programming has led the whole world to believe in a new world order religion that they call "science," where the false prophets are none other than the likes of Albert Einstein, Isaac Newton, Charles Darwin, Georges Lemaitre, men that have led you down the left path of ignorance.

Most of you have it on faith that outer space is real and that we've landed on the moon. Yet you have no proof for any of it except our overlords' word for it. Images can be manipulated and constitute no proof either.

This book looks to encourage anyone who dares question what they've been told to believe. People have been programmed to shun away from discomfort and shining a light on this matter makes many people very uncomfortable, as it shakes the very foundations of their core beliefs, ingrained by years upon years of television, "educational" and generational programming. It is not an easy task but it needn't be so difficult, nor frightening. This book seeks to introduce the reader to the paradigm shifting reality that is flat earth.

Figure 1: Knowledge is in the hands of the few and the rest are kept ignorant. The classic structure for manipulation and control.

1. TIME LAPSE PHOTOGRAPHY & SIMPLE NIGHT SKY OBSERVATIONS

We are told to believe:

- Earth's rotational speed: 1,000 mph (equator)
- Earth's revolution speed: 70,000 mph
- Sun's speed around the Milky Way Galaxy: 450,000 mph
- Milky Way Galaxy moving at an astounding 1.3 million mph

Figure 2 is a time-lapse photograph showing how the stars in the night sky trace perfect circles or perfect arcs.

The model we are presented with above in figure 1 is not compatible with our observations as recorded by the time lapse photography.

Taking into account the different orbital, revolution, and rotational speeds, the pattern of the stars' trajectory in the night sky would be much more complex as opposed to the simple, predictable, perfect circles, or perfect arcs, that we observe and record in real life.

Figure 1.1

Figure 1.2

Figure 1.3

Figure 1.4

Wernher Von Braun was an aerospace engineer and the leading figure in the development of rocket technology in Nazi Germany. He was recruited by the US during Operation Paperclip and was recognized as the "father of rocket technology and space science." All throughout his life Von Braun has advocated for a human mission to Mars. Yet, he wished to imprint a testament to God's handiwork on his tombstone: "The heavens declare the glory of God; and the firmament sheweth his handywork." PSALMS 19:1

In other words, the night sky is like a fingerprint, proof of a grand architect.

Another point to make is that the constellations haven't changed in millennia. A constellation is defined according to wikipedia as a "group of stars forming a recognizable pattern that is traditionally named after its apparent form identified with a mythological figure. The Western-traditional constellations are the forty-eight Greek classical patterns dating as far back as the 5th century BC."

None of these constellations, or star patterns, have changed in the slightest despite the rotation, revolution, and orbital speeds that would make for ever changing complex patterns in the night sky.

Imagine if you will, if the earth were holding a pencil over a giant sheet of paper that underlays our galaxy. What pattern would the pencil be tracing as the spinning, revolving globular earth made its way across the galaxy?

2. DOES WATER STICK TO A SPINNING BALL?

Centrifugal force is “the apparent force, equal and opposite to the centripetal force, drawing a rotating body away from the center of rotation, caused by the inertia of the body,” as defined by the American Heritage Dictionary.

The centripetal force is an actual force. In other words, when spinning an object on a string, the string exerts an inward centripetal force on the object, while the object exerts an apparent outward force on the string that results from the effect of inertia during a turn.

Inertia is a property of matter by which an object continues in its state of rest or uniform motion in a *straight* line, unless that state is changed by an external force.

In other words, the rotating mass experiences an apparent centrifugal force pushing it away from the center of its circular path, even though what it is actually experiencing is the inward centripetal force that keeps it from literally going off on a tangent, due to its inertia.

Thus, when spinning a wet tennis ball, water droplets will be ejected, going off on a tangent as it leaves the surface of the tennis ball.

This of course begs the question as to why gravity doesn't allow for the water to stick to the spinning ball as it does for the spinning globe. Not a single disturbance can be observed nor recorded on a lake surface or puddle of water that is at rest on the surface of our so-called spinning globe. The lake remains placid, the puddle of water remains unperturbed, despite the assumed rotation of the earth. This allows for one piece of evidence that the earth does not spin.

Figure 2.1

Figure 2.2

Yet, “experts” will have us believe that “gravity” is what allows for the bodies of water to remain at rest and unperturbed on the earth’s surface. Gravity is what keeps the oceans from flying into outer space. Gravity is what allows Australia and everyone there not to fall off the map. Gravity is what makes an airplane fly straight and level around the so-called “globe.” Gravity is why objects fall.

Yet the hot air balloon rises; a butterfly will spread its wings and defy the all-powerful, magical, mighty force of gravity. Not even the vacuum of outer space is strong enough to suck out earth’s atmosphere and deplete it of oxygen.

Figure 2.3

3. LAWS OF BUOYANCY AND DENSITY: ARCHIMEDES PRINCIPLE

The laws of buoyancy and density are also known as Archimedes principle. More specifically, Archimedes Principle states that the buoyant force on a submerged object is equal to the **weight** (or **density**) of the fluid that is displaced by the object.

In NASA's own words, "hot air balloons rise into the air because the density of the air (warmer air) inside the balloon is less dense than the air outside the balloon (cooler air). The balloon displaces a *fluid* that is heavier than it is, so it has a buoyant force acting on the system. Balloons tend to fly better in the morning, when the surrounding air is cool."

Notice how NASA uses the term *fluid*. This is a key word. Air, just like water, is defined as a fluid in physics. An object submerged in water will behave according to the same set of laws as an object submerged in air. Hence, **an object rises or falls not because of gravity, but because of its relative density compared to its surrounding environment.**

Figure 3

4. DOES THE ATMOSPHERE ROTATE WITH THE EARTH

Imagine if you will a building large and tall enough to house a floating hot air balloon, that way it cannot be affected by the wind. What do you think would happen to the balloon after enough time has passed for the earth to rotate beneath it? Would it still be floating in the same spot? Or, would it have moved horizontally, hitting the building wall?

People have thought of using balloons as a really cheap way of traveling. The idea held that you should be able to land in a different place after some time because the earth rotates below. As we all know, this does not happen. We are told to believe that it is because the atmosphere (air, clouds etc) also rotate with the same angular velocity as the earth with a 1:1 ratio. This is simply another misdirection.

Figure 4.1 is what we actually observe, where the balloon floats in the same spot because the earth does not rotate. If earth were to rotate figure 4.2 is what we would experience.

Figure 4.1 Earth is rotating, so building is also rotating because it is attached to the ground. But why is the balloon also rotating?

Figure 4.2 What might be expected is the balloon hitting wall

5. GEOMETRY: MEASUREMENT OF THE SHAPE OF THE EARTH

The etymology of *geometry* is literally the *measurement of the Earth*. Simple geometry is all that is required to determine its shape. With the proper geometric instruments and mindset, one can extrapolate the shape of the earth.

Rough topography might make it more challenging to determine the flatness or degree of curvature a terrain might have. However, sea level is the universal reference point from which all elevation is measured.

There are certain places on earth where the absence of physical features make it very easy to determine on a large scale whether the land naturally curves or remains straight throughout.

A good example of this is the Bolivian salt flat, Salar de Uyuni, with more than 10,500 square kilometers of “exceptional flatness,” as wikipedia puts it. Huffington Post describes it as an “endless plane of blindingly bright salt.”

The mainstream media seems to agree on the flatness of this section of the world. But they don't agree on the flatness of the oceans (that would be because of the waves.) What makes a surface flat?

Adrian Borsa, a geophysicist at the US Geological Survey in Pasadena, California, described the flats “as if you're on a white ocean with no waves,” seemingly comparing the flatness of Salar de Uyuni to the flatness of oceans. He follows up, sadly, with “you see the horizon, you see the curvature of the earth. It's absolutely featureless.” Another example of truth mixed with lies.

mathforum.org states that although geometry gradually grew more abstract, people assumed until the beginning of the 19th century that the axioms and postulates of geometry naturally corresponded to the physical world as they knew it on earth. In modern terms, however, geometry need have no physical reference at all.”

6. PLANES FLY STRAIGHT AND LEVEL

We live in a 1984 Orwellian society where everything has lost its meaning by taking on multiple meanings and where $2 + 2 = 5$ (many examples online that argue $2 + 2 = 5$).

As thoughtco.com writes “you hear about parallel lines that by definition never meet each other — except they do in some warped reality dreamt up by Albert Einstein. The concept you have always known as the line has been renamed ‘line segment.’”

Parallel means they cross. Line means curve and curve means line.

As a pilot, you have onboard instruments that help you determine your trajectory and whether you are flying level (horizontally level) and straight (laterally level, i.e. straight line).

The main one however remains the attitude indicator, otherwise known as the artificial horizon. When your airplane is stable and flying straight and level, your attitude indicator will remain on its artificial horizon with no up or down pitching motion.

This is another measurement and indication that we are flying over a plane, not a curve, as flying over a curve would require constant pitch correction.

7. WATER SEEKS ITS OWN LEVEL:

I kept this one for last. If the evidence so far hasn't convinced you that the earth is not a spinning globe, this one should seal the deal for you. Simply put, water always seeks its own level. Wikipedia defines **Fluid statics** or **hydrostatics** as,

*"the branch of **fluid mechanics** that studies **fluids at rest**. It encompasses the study of the conditions under which **fluids are at rest in stable equilibrium as opposed to fluid dynamics, the study of fluids in motion. Hydrostatics** are categorized as a part of the fluid statics, which is **the study of all fluids, incompressible or not, at rest.**"*

A physical property of any fluid at rest is that its surface is always level. This is why we use a spirit level to measure whether a construction is level and not tilted.

Google defines spirit level as a device consisting of a sealed glass tube partially filled with alcohol or other liquid, containing an air bubble whose position reveals whether a surface is perfectly level.

Incompressible fluids, like water, will fill up a space up to a certain point where it reaches equilibrium and finds its level. Water, lakes, oceans, are level from shore to shore. There is not one side of the lake or ocean that is at higher elevation than the other. This happens with rivers as water The world's greatest rivers, such as the Nile, the Tigris, the Amazon, or the Mississippi rivers all find their way to the ocean because that is where about 96% of all of earth's water is held which covers 70% of the earth's surface.

Figure 7.1

Figure 7.2

The ocean's water level is called *sea level* and remains the standard reference point for all elevation measurement.

Hence, if 70% of the earth is covered in water, which has the physical property of seeking (and finding) its own level and equilibrium state, then by deduction we must draw the logical conclusion that we live on a plane.

FLAT WATER = FLAT EARTH

8. ROUND EARTH CURVATURE DROP OFF

Simple globe earth math. You be the judge.

Round Earth Curvature Dropoff

Distance	Drop
1 mile	8 inches
2 miles	32 inches
3 miles	6 feet
4 miles	10 feet
5 miles	16 feet
6 miles	24 feet
7 miles	32 feet
8 miles	42 feet
9 miles	54 feet
10 miles	66 feet
20 miles	255 feet
30 miles	600 feet
40 miles	1066 feet
50 miles	1666 feet
60 miles	2400 feet
70 miles	3255 feet
80 miles	4266 feet
90 miles	5400 (1 mile+)
100 miles	6666 feet

Physical Dropoff

- If Earth was spherical, then objects X distance away from you should have a predictable X amount of vertical drop.
- Objects of a certain height should be physically impossible to see after a certain distance - regardless of visual equipment; the Earth itself would create physical horizon.

Too Early?
Many ships disappear 'over the horizon' after only 2 miles. Either we are on a really, really small globe, or it's just a visual effect called the horizon. Just pick up your binoculars, and you'll be able to see it again...

RED FLAG If Earth was round, there would be only a short distance we could see - regardless of equipment.

RED FLAG If you can see tall objects beyond the height and distance possible, that should be your clue that the Earth is not a sphere...

RED FLAG Shouldn't planes, maintaining altitude, appear to be nose-diving into the horizon at the rate of dropoff?

RED FLAG Very tall objects should visually angle away and lean with distance - but they don't; cityscapes always stay straight up and down.

RED FLAG It should be impossible to see objects at 30 miles. Maybe they know something you don't...

Atmospheric Interference Factors

The following are big obstacles to clarity of vision, and can affect our perception and focus:

- Density of the atmosphere (air density)
- Humidity levels
- Fog / Haze
- Clouds
- Dust / Pollen / Smoke
- Pollution
- Light pollution
- Shadows
- Physical objects (waves, trees, etc.)

RED FLAG Supposedly, there is **more** atmosphere between you and the Moon, than there is atmosphere between you and mountains miles and miles away on the horizon; yet, you can see the **Moon clearer and in sharper detail** with your naked eye than the distant blurry mountains. Maybe the Moon is way closer than you think...

~62 miles of atmosphere (not counting space)

Try ~8 miles
